Bluf!

The global Organic food market is estimated to be worth \$553 billion by the end of 2033.

01 Business Overview

Overview

The organic grocery market is experiencing rapid growth, driven by increasing consumer awareness of health and sustainability.

With the demand for organic products and online shopping on the rise, GreenGrocer wants to strategically position itself to tap into this expanding market by introducing an Organic Grocery Delivery Service.

02 Data Overview

Data Overview . ●

The dataset used comes from 3 million grocery orders from more than 200,000 Instacart users. The data was filtered down to only focus on Organic Products. The dataset includes information on the following:

- 190,000 users
- 2.3 million orders
- 5000 Organic products

Recommendations

Recommendations

01 Promotions & Marketing

- Targeted marketing campaigns on Organic produce

02 Encourage Frequent Purchases

- Personalize recommendations based on purchase history, frequent purchases, and similar products purchased by other customers

03 Customer Retention

- Offer Subscription and/or Loyalty Rewards programs

04 Enhance Product Placement

- Implement "quick add" or one-click reordering features for faster checkout
- 
- 

06 Future Steps

Future Steps

- Use Apriori and Association rule results to build a recommendation system.
- Explore alternative ways to handle class imbalance and engineer more features.
- Apply Deep Learning models to extract better insights from the data.

Thanks!
